ACCESS CONTROL

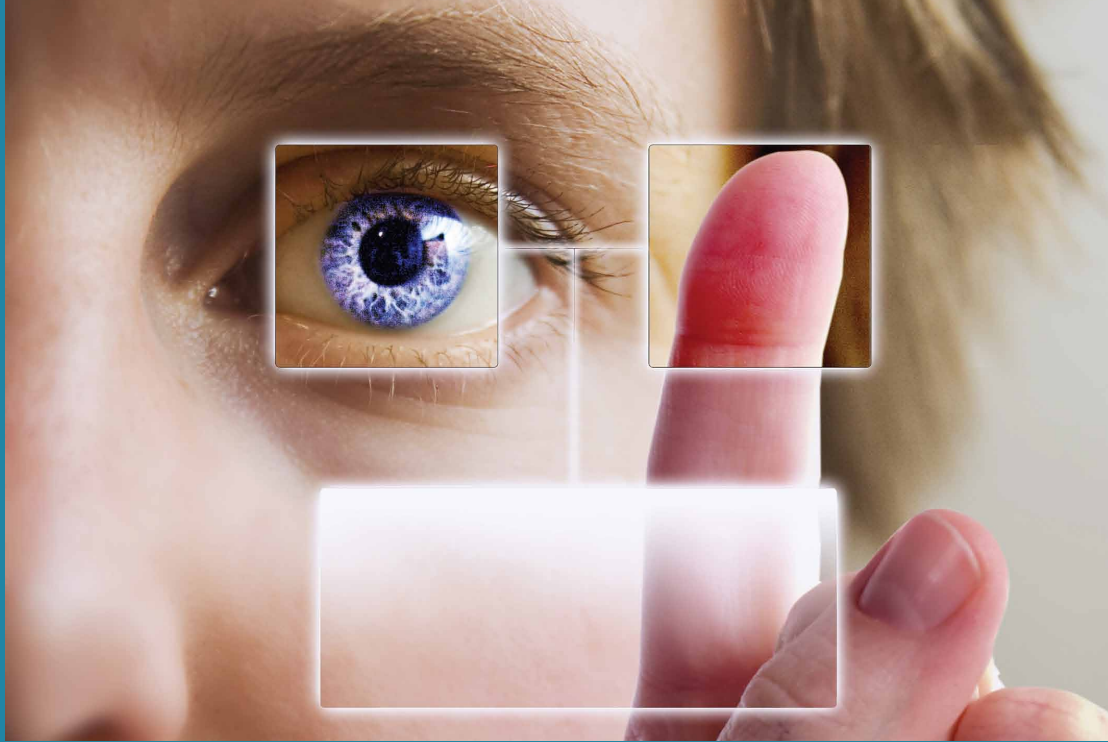

Brikyl Solutions is part of Diamond Security Solutions which specialises in access control and Biometrics for businesses where security access is critical, access control allows only authorised individuals or vehicles to enter or gain access to critical resources.

Access Cards, Proximity Readers and Access Control Software

Being similar in size to a credit card and access card also known as a proximity card can identify individuals and allow access to a pre- defined area by simply scanning the access card in front of the proximity card reader. The proximity card reader then analyses the data stored in the access cards and determines whether the user has authorised access based on access level. The reader then stores the information and records the activity for future reference or reports. This type of system can monitor individuals access, protect sensitive information, property and people, it can also provide full activity reports. Access control software is password protected and allows administrator access to particular programs, networks and drives.

**DIAMOND CORPORATE
SERVICES**

BIOMETRICS

Rather than using a physical access card to gain entry into premises Biometrics uses unique human characteristics to identify the person seeking entry to controlled area. For example a finger can be placed on a reader and the Biometrics access control system can identify the unique characteristics of the fingerprint. The biometrics reader can then regulate entry permitting authorised access only to an area. Biometrics can remove the worry involved with stolen, loaned or lost electronic access cards by using an individuals distinguishing features to prevent unauthorized access.

The combination of Access control, biometrics CCTV and intercom systems is a powerful tool that can be used to protect people, property and assets.
